

Environmental Information Regulations – Response - 26675

We are working with the River Waveney Trust to investigate the feasibility of installing fish passage structures downstream of two highways bridges near Harleston.

The project is aiming to install rock ramps on the riverbed on the downstream face of the bridges to reduce the drop in water level so that migratory fish and eels can traverse the structure. The engineering is unlikely to affect the engineering or structure of the Highways assets, but will directly abut the downstream face and we may have to engineer an interface. We would like to open communications and identify any constraints that might affect the feasibility of the works.

Please could we request:

- 1. Any available condition reports for the structures.*
- 2. Any existing plans for works or maintenance to the bridges.*
- 3. Details of any plans or ambitions to improve fish passage at these locations.*
- 4. A local contact with whom we can discuss the works and any Highways permitting required.*

The structures are located at:

Site	What3Words	Latitude/Longitude	OSGB36
<i>Dicky Hill</i>	<i>///nags.sedative.quirky</i>	<i>52.408157, 1.303619</i>	<i>TM (62) 24799 84040</i>
<i>Lushbush</i>	<i>///shoving.craziest.punchy</i>	<i>52.410167, 1.312843</i>	<i>TM (62) 25416 84293</i>

- 5. Do you also have any as-built drawings of the structures that you could share?*
Please note, Suffolk County Council's Structures team have identified the location as being in Norfolk. Could you therefore please redirect your request to Norfolk County Council:
