

## **Environmental Information Regulations – Response – 26983**

*With Reference to: **Church Lane Bridge, Thelnetham**  
SCC - 2 previous Request References from Highways and Customer Services  
**Suffolk Highways, Structures Design Manager (538269).***

*The report does not appear to be on the SCC reporting system any longer, and therefore this letter is to request further information under the above specified FOI Act of 2000.*

*I require the build specification of the Church Lane Bridge in Thelnetham, Suffolk and the definitive calculation, showing the weight bearing capabilities of that structure.*

Suffolk County Council does not hold the information specifically requested. Our records indicate that the structure comprises precast reinforced concrete box culvert units and was constructed circa 1978. The culverts units would be expected to have been designed to the contemporary design standards at the time, which would have included all HGV's that comply with the Construction & Use and Authorised Weight Regulations.
