

Environmental Information Regulations – Response - 27026

Under the Freedom of Information Act 2000, I request the following information relating to electric vehicle (EV) charging points for which the council is responsible.

1. As of the most recent date for which data is available, how many EV charging points does the council own, operate, or maintain?

The Council has 85 working chargepoints installed primarily for pool and other fleet vehicles. A number of these chargers are made available to staff, contractors and other authorised users on a £chargeable basis

2. Of these, how many are currently unavailable for use (for example, out of order, damaged, or otherwise not operational)?

Six units are faulty pending potential replacement under public charging schemes. Three units have temporary faults which are being addressed as routine breakdown maintenance.

If this information is already recorded, please provide a breakdown of the reasons for unavailability (e.g. fault, damage, awaiting repair). If this breakdown is not held, please provide only the total figure.
