

Environmental Information Regulations – Response – 27100

Please provide, for the period 2022–2024:

- 1. Any corporate reports, dashboards, or briefings relating to Highways / Road Maintenance spending that include geographic comparisons or distribution across Suffolk.*
- 2. Any corporate-level methodology, framework, or criteria used to allocate highways or road maintenance funding geographically.*
- 3. Any Equality Impact Assessments or strategic assessments within this area that consider geographic distribution.*

Suffolk County Council (SCC) does not hold this information.

- 4. If no such corporate-level analysis or framework exists, please confirm this. For clarity, I am requesting existing documents only, not the creation of new information or extraction of raw data.*

SCC can confirm that the corporate-level or framework analysis requested does not exist. We do not hold this information because highway funding is not allocated on a geographical basis; instead, SCC directs investment according to asset condition and need.

Further details on the framework we follow can be found in the Well-managed Highway Infrastructure Code of Practice, which is publicly available, and should be read alongside SCC's Highway Infrastructure Asset Management Plan, also available on our website.
