

## **Environmental Information Regulations – Response - 27488**

*I am writing to request information under the Freedom of Information Act 2000 concerning the inspection of highway structures (bridges, culverts, and similar structures) maintained by your authority.*

*This request is made with reference to the inspection framework set out in CS450 and the Well-managed Highway Infrastructure: A Code of Practice (Road Liaison Group), which together establish a maximum six-year interval between Principal Inspections unless a longer interval has been formally approved through a risk-based assessment.*

*For every highway structure within your authority's inventory, please provide the following, ideally as a single spreadsheet with one row per structure:*

1. a) *The structure name and unique identifier or reference number.*
1. b) *The asset type (for example, bridge, culvert, retaining wall, or footbridge) and the span or length, where held.*
1. c) *Confirmation of ownership and maintenance responsibility (i.e. whether the structure is maintained by your authority, a third party, or held under a Rights of Way designation), so that responsibility for each structure is unambiguous.*
1. d) *The date of the most recent General Inspection.*
1. e) *The date of the most recent Principal Inspection.*
1. f) *The scheduled date of the next Principal Inspection.*
1. g) *The inspection interval currently applied to the structure, in years, and whether this is the standard six-year interval under CS450 and the Well-managed Highway Infrastructure Code of Practice, or an extended interval.*

*See attached "Inventory" spreadsheet.*

*2. For any structure where the Principal Inspection interval has been extended to ten years or more under a risk-based assessment, please provide, for that structure individually rather than as a general policy statement:*

2. a) *The date on which the extension was approved.*
2. b) *The role or team responsible for approving the extension (for example, Principal Engineer or the Bridges and Structures Team), without needing the name of the individual officer.*
2. c) *The methodology or criteria used to justify the extension under your risk-based assessment process.*

*2a – As shown on attached "Inventory" spreadsheet.*

*2b – The Structures Team is responsible for determining all inspection frequencies.*

*2c – Inspection frequencies and scope of inspection/reporting are determined based on a number of variables including span/retained height, class of highway carried, primary member construction form/material, and engineering judgement, as outlined on the attached document "Principal Inspection levels & frequencies".*

*3. The date on which your authority's current risk-based variable interval policy (if you operate one) came into force, and what governed Principal Inspection intervals for structures last inspected before that date.*

The current risk-based approach for Principal Inspection (PI) frequencies was instigated in 2010 for carriageway structures, and 2022 for PROW structures. Prior to the current approach PIs were undertaken at 6-year intervals for carriageway bridges that are subject to a PI; for PROW bridges there was no formal PI programme.

*4. Confirmation of whether this disclosure represents your authority's complete inventory of highway structures, or whether any structures, or any historical inspection records, are held separately (for example in a legacy asset management system not reflected in this return).*

The details provided include for our complete inventory of highway structures.

*5. Confirmation of whether any dates in the disclosed data are system defaults, placeholders, or otherwise not genuine inspection dates, and if so, which records these affect.*

None.

## Principal Inspection Guidance

### Introduction

In accordance with the guidance contained in the Well-Managed Highway Infrastructure Code of Practice, a risk-based approach is taken to determine the frequency and scope/detail of Principal Inspections that are undertaken on highway structures. This risk-based approach enables priorities, risks, and affordability to be considered. (Note that alongside the Principal Inspection programme all structures are also subject to a General Inspection on a biennial basis.)

### Inspection levels

Each structure has been assigned an inspection level, which defines who should undertake the inspection, what needs to be looked at during the inspection, and to what level of detail this needs to be reported.

Due to the limited SCC resources that are currently available, it's likely that Consultants will be engaged to undertake the inspection of the larger or more complicated structures (Medium & High), with the SCC bridge inspectors undertaking the Low-level structures. (Note that if a Principal inspection is undertaken then a general inspection is not needed until the next programmed General Inspection.) It should be noted that the Inspection level that has been assigned to each asset is not fixed and feedback from the inspector would be appreciated if it's felt that an alternative level might be more appropriate. The matrixes below are also to be used as guidance only, the actual level of inspection required on each structure should be reviewed individually using engineering judgment on a frequent basis.

### Inspection risks

The risk-based approach used to determine what level of inspection is undertaken is based on 3 primary issues – The Class of road, the span, and the primary construction material/form.

### Inspection Level details

Level	Personnel	Access	Traffic Management	Notes
High	Team including a Lead Inspector	Comprehensive range of access equipment used to allow close examination, within touching distance, of all accessible elements of the structure	Detailed complex traffic management including road closures or Network Rail possessions.	The majority of High level inspections will be large bridges or more complex bridges or retaining walls.
Medium	Lead Inspector	A limited range of access equipment used to allow close examination, as close as is reasonably practicable considering importance and age of element, of all accessible elements of the structure	Moderate level of traffic management	The majority Medium level inspections will be smaller but complex bridges or retaining walls.
Low	Inspector	Simple access equipment (e.g. small stepladder) used to allow close examination, as close as is reasonably practicable, considering the importance and age of element, of all accessible elements of the structure.	No traffic management	The majority Low level inspections will be smaller bridges or retaining walls.

Level of Inspection Risk Matrix

Bridge / Culvert

Road Class		Span & Bridge Type					
		10m+		5m –10m		1.5m – 5m	
		Type1	Type 2	Type1	Type 2	Type1	Type 2
		A	H	H	H	H	M
B	H	H	H	M	M	M	
C	H	M	M	M	L	L	
U	H	M	M	L	L	L	
Other	M	M	M	L	L	L	

Structure Type: Type 1 Cast Iron, Pre/Post stressed Beams, Steel, Wrought Iron  
 Type 2 – Brickwork Arch, RC Slab, RC Beam & Slab, Armco, Wall

Retaining Wall

		Max Retained Ht		
		7m+	2m - 7m	1.5m – 2m
Highway Retained	A Road	H	H	M
	B, C or U Road	H	M	L
	Other	M	L	N/A
Retained Above Highway	Other	M	L	N/A

Footbridge

	5 to 10m		10 to 20m		20m+	
	Timber / Brick	Steel / Concrete	Timber / Brick	Steel / Concrete	Timber / Brick	Steel / Concrete
Footway	N/A	N/A	N/A	L	H	H
Cycleway	N/A	L	L	M	H	H

Low Level (Undertaken at 10-year intervals)

Close inspection of all elements of the structure (as close as is reasonably practicable, considering the importance and age of elements)  
Defects need to be reported on the BCI system; Photographs of the bridge approaches and elevations need to be taken. Photographs and sketches of significant structural defects.

Medium Level (Undertaken at 8-year intervals)

Close inspection of all elements of the structure (within touching distance, considering the importance and age of elements)  
Defects need to be reported on the BCI system; Photographs of the bridge approaches and elevations need to be taken.  
General photographs of all structural elements.  
Photographs and sketches of all defects.

High Level (Undertaken at 6-year intervals)

Close inspection of all elements of the structure (within touching distance)  
Defects need to be reported on the BCI system; Photographs of the bridge approaches and elevations need to be taken.  
General photographs of all structural elements.  
Photographs and sketches of all defects.
