

Environmental Information Regulations – Response - 27755

I have been trying to resolve an issue regarding a previous S.C.C. planning decision made back in 2015 which has directly impacted the residential community living close to 'Suffolk One' 'College' ie. major student parking, all day long in nearby streets.

In order to understand what happened back in 2015, when 'Suffolk One' had been operating as a school/academy for several years and since school children had no cars, the local road lining restrictions in nearby Sprites Lane & Goldcrest road were sufficient, with appropriate waiting limits being enforced. But from Sept 2015 somehow the school/academy had a 'change of use' into a 'College' without any further interaction or recourse to local residents' opinions regarding the major impact of all day student car parking in their streets.

In order to discover how this change of use was granted by S.C.C. Planning dept. Where is the actual line of text in that planning change that instigated this major change?

The original granting of planning permission (reference B/08/00873/CDP) by Suffolk County Council was for the following:

Erection of new sixth form centre (20, 750 SQM), synthetic turf sports pitch and associated floodlighting. Car park, bus drop-off area, landscaping and footpath diversion.

The application documents and planning permission can be viewed on our website <https://suffolk.planning-register.co.uk/Planning/Display?applicationNumber=B/08/00873/CDP>

The original planning permission was for a sixth form centre; therefore, no change of use application is or has been required.
