

Freedom of Information Request – Response – 27767

I am writing to request information under the Freedom of Information Act 2000.

I am undertaking research into the equipment currently being used by different UK FRS. I have looked on your service website and for previous FOI disclosures, but couldn't find the information I was looking for (apologies if I have simply missed it). Please could you provide details of the hose reels fitted to the pumping appliances currently operated by Suffolk Fire and Rescue Service, including:

1. Internal diameter of hose reel tubing (e.g. 19 mm, 22 mm), length (e.g. 60m, 80m) and whether different hose reel sizes are used across the fleet. (*And if currently using 22mm, please you also provide the year when these were first brought into use in your service, if this is available).*

19mm, 17 appliances are pre fitted to take 22mm if required

2. Nominal hose reel flow rate and pump operating pressure.

Pump is 2000lts/min at 10 bar operating 16 & 25 bar

3. Make and model of pumps fitted to current frontline pumping appliances.

Godiva prima 2010

4. Make and model of hose reel branch(es).

Delta H500ST.
