

Environmental Information Regulations – Response - 27820

Thank you for your response regarding fire hydrant FH/50414.

I note that the response lists inspection dates, including an inspection on 21 July 2026.

Could you please provide a copy of the actual inspection/maintenance record associated with the 21 July 2026 visit, together with any photographs, notes, condition/access records, works records or other information recorded during that visit?

Suffolk Fire and Rescue Service do not hold copies of actual inspection/maintenance records, or photographs for this hydrant. The recorded digital information we do have for the inspection on 21 July 2006 includes the inspection date & a note saying the cover was silted over.

The FH cover at the location has also been painted yellow this year. If the Council holds any record of when this was painted, who carried out the work, or whether this formed part of the 21 July 2026 inspection/maintenance visit, I would be grateful if that information could also be provided.

We do not have a documented record detailing that the cover was painted, however, we can confirm that this was done at the time of the inspection on 21 July 2026 by a Hydrant Inspector.

If equivalent inspection records are retained for the earlier visits listed in your response (2004, 2010, 2012, 2017 and 2020), I would also be grateful for copies of those records.

As already mentioned, we do not keep copies of these records.
