

- Trees and hedge may be planted in slopes adjacent to swales without underdrains subject to appropriate soil properties, species selection and root protection agreed in writing with SCC - See Suffolk Design guide for tree in Highways.
- Area adjacent to carriageway to be constructed with 100 x 100 x 100mm granite setts on a Class 3 mortar bed 50mm thick with Class 3 12mm wide mortar joints to capture silt/debris from carriageway.
- Area to be extended to 1m to allow for street lighting.
- Topsoil 150mm thick with turf or planting as permitted desian.
- Inspection chamber to be at designed at 70m centres and connected into surface water system.
- Swale design to alian with National & LLFA guidance: longitudinal slopes should be 0.5-6% (1:33) unless specific site/safety arrangements allow for alternative criteria. Check dams needed if gradient steeper than 0.5-6% (1:33).

Minimum length of swale to be 5m.

Perforated pipe should be elevated in infiltration structures to ensure it does not convey flow during 1:1+CC rainfall event.

Type B material can be replaced by bio-retention material for greater treatment of surface water but overflow will need to be designed at a level to be agreed with SCC and LLFA.
