

Lighting Column Datasheet for Banners/Festive Motifs

Note: This data sheet should be used for signs, decorations and banners.

It will be assumed the sign is rigid unless additional information is provided. For example, a banner supported along the top edge only, or three-point support so that the outer lower corner is free.

There are also spring-loaded sign supports for which full information will be necessary.

Details (Tick as appropriate)		First Sign	Second Sign
Sign Shape	Rectangular		
	Circular		
	Irregular (provide details separately)		
Sign Weight	w kg:		
Mounting Height	h metres:		
OR Clearance to lowest point	metres		
Eccentricity (if central $e = 0$)	e mm		
Sign depth or diameter	d mm		
Sign width if not circular	w mm:		
Solidity % (solid = 100%)	d mm		
If solidity is not known provide a sample, a photograph with scale or contact details of supplier.			
Orientation of attached sign in relation to the lantern	Under column bracket 0 degrees		
	Right angles to column bracket 90 degrees		
	Opposite column bracket 180 degrees
